

GamepadOS — 30-Second Ad Production Kit

Vertical 9:16 · TikTok / Reels / Shorts · fast-paced tech reveal. Shoot every clip ~2× longer than needed. One idea: **the controller you already own.**

PART 1 | The 30-Second Shot List

0:00-0:03 1. The Hook

Visual: Over-the-shoulder of you mid-game on the KEYBOARD, hands fumbling, ending in a crash/near-miss.

Camera & light: Phone on a mini-tripod behind your shoulder; monitor fills top 2/3. Lights off — let the monitor glow light you; one soft 45° fill.

Edit cues: Open COLD (no logo). Text snaps in on the crash: "Gaming on PC... without a controller?" Record-scratch SFX, then 0.5s silence.

On-screen: "Gaming on PC... without a controller?"

0:03-0:05 2. Pattern Interrupt

Visual: Hand leaves the keyboard and PICKS UP THE PHONE in one smooth move.

Camera & light: Tight side-angle at desk level, shallow focus on the hand. Phone already showing the controller UI, glowing.

Edit cues: First 1s B-roll transition: whip-pan / speed-ramp keyboard -> phone. Music DROPS here.

On-screen: "Your phone already is one."

0:05-0:09 3. The Reveal (Money Shot)

Visual: Two-thumb gameplay on the phone intercut with the PC game reacting INSTANTLY.

Camera & light: (a) top-down of thumbs on phone, (b) clean screen-record / monitor shot. Front-light the phone so the UI is crisp; shoot slightly off-axis (no glare).

Edit cues: Hard-cut phone<->monitor 4x in 2s to PROVE sync. Pulse "ZERO LAG" on each cut. Snappiest shot in the ad.

On-screen: "ZERO LAG"

0:09-0:13 4. Setup Is Nothing

Visual: PC shows a QR code -> phone scans it -> 'Connected.' Three clean beats.

Camera & light: Over-the-shoulder for the scan, then close-up of the 'Connected✓' state. Keep the monitor the brightest thing in frame.

Edit cues: Speed-ramp the scan (fast -> slow-mo on the tick). Text counts it out. Click/chime SFX on connect.

On-screen: "1. Scan -> 2. Play"

0:13-0:16 5. Gyro Wow-Factor

Visual: TILT the phone left/right; the on-screen car / crosshair follows.

Camera & light: Front-on close-up of the phone tilting, dark background so motion reads. Quick monitor-reaction cutaway.

Edit cues: Add motion-trail/blur on the tilt + a curved arrow overlay.

On-screen: "Tilt to steer. Real gyro aiming."

0:16-0:19 6. Customization

Visual: Finger drags / resizes / recolors a button in the editor; then 2-3 finished layouts flash by.

Camera & light: Top-down, phone flat, even soft light (no hotspots) so colors stay true.

Edit cues: Snappy 1s B-roll of different layouts (racing / FPS / D-pad).

On-screen: "Build any controller you want."

0:19-0:22 7. Feel It (Haptics)

Visual: Big in-game moment + the phone visibly buzzing in hand.

Camera & light: Extreme close-up, phone in palm, shallow focus, monitor flare in the bokeh.

Edit cues: Sync a screen-shake edit + low-end thump SFX to the rumble.

On-screen: "Feel every hit."

0:22-0:25 8. The Value Punch

Visual: An expensive controller on the desk gets nudged aside; the phone takes its place.

Camera & light: Clean tabletop, single accent light, minimalist — an Apple-style beauty shot.

Edit cues: Strike-through '\$60' -> replaced by your price / 'Free to try.' Swoosh SFX.

On-screen: "\$60 -> Free to try"

0:25-0:28 9. Hero Beauty Shot

Visual: Phone in a stand IN FRONT of the glowing monitor, both screens running; slow push-in, nobody touching it.

Camera & light: Slow dolly/push-in (slide the phone forward for a cheap dolly). Darken all but the two screens.

Edit cues: Subtle slow-mo + a clean light sweep. Begin fading the logo in.

0:28-0:30 10. Logo + CTA

Visual: No footage — full-screen end card.

Camera & light: Pure graphic.

Edit cues: Logo snaps to center on the final beat. Tagline + CTA. Music hard-stops (no fade). Hold 2s.

On-screen: "Your phone. Your controller. Zero lag." / "Download free -> gamepad.space"

PART 2 | Raw-Clip Capture Checklist (tick as you film)

Bucket A — Gameplay / monitor (record PC screen + film the monitor)

Got	Clip ID	What to capture	Rec	Shots
	A1_keyboard_struggle	Keyboard play, awkward, ending in a crash/near-miss	8s	1
	A2_game_reacting	Clean screen-record of the game responding to input	15s	3, 5, 7
	A3_big_moment	One dramatic beat — boost / explosion / hit	5s	7
	A4_connect_screen	PC showing the QR code, then 'Connected ✓'	8s	4

Bucket B — Phone screen action (top-down, bright, glare-free)

Got	Clip ID	What to capture	Rec	Shots
	B1_thumbs_playing	Top-down of both thumbs on the controller UI	12s	3, 9
	B2_qr_scan	Phone raised to the monitor, scanning the QR	6s	4
	B3_gyro_tilt	Phone tilting left/right (dark background)	8s	5
	B4_customizing	Finger dragging / resizing / recoloring a button	10s	6
	B5_layouts_flash	2-3 finished layouts (racing / FPS / D-pad), 2s each	6s	6

Bucket C — Real-world / hero (cinematic, shallow focus)

Got	Clip ID	What to capture	Rec	Shots
	C1_grab_phone	Hand leaves keyboard, picks up the phone, one smooth move	5s	2
	C2_phone_buzz	Extreme close-up of phone in palm, slight shake	5s	7
	C3_value_gag	Expensive controller nudged aside, phone takes its place	6s	8
	C4_hero_pushin	Phone in stand in front of glowing monitor, slow push-in	8s	9

Bucket D — Made in editing (do NOT film)

Got	Clip ID	What to capture	Rec	Shots
	D1_endcard	Logo + tagline end card	—	10
	D2_typography	Kinetic text overlays	—	all
	D3_latency	'ZERO LAG' counter + SFX (scratch / click / thump / swoosh)	—	3,7,8

MINIMUM VIABLE CUT: short on time? Film just **A2, B1, B3, C4** — those four carry the whole ad.

PART 3 | Director's Notes

- **Front-load the magic.** Shots 1-3 must hook + reveal in the first 3 seconds — that's where viewers decide.
- **Show, then label.** Footage first; drop the text overlay a half-beat after the visual.
- **Prove the latency.** Shot 3's rapid phone↔screen intercut is what makes 'zero lag' believed.
- **Caption everything.** ~85% watch muted. Burn in text, ≤5 words per card, high contrast, inside the safe zone.
- **Three cuts, one shoot.** Export a 30s, a 15s (shots 1-3 + 9-10), and a 6s bumper (shot 3 + logo).
- **One accent color** across all overlays = matches the app UI = looks like a real brand.
